

STRAVA SPLINT BATH

Your Strava Splint bath is fitted with a small in-line filter which protects the circulation pump against small impurities, and debris which can accumulate over time and clog the pump.

Please remove and clean the in-line filter every time you drain and clean the bath, or more often if needed.

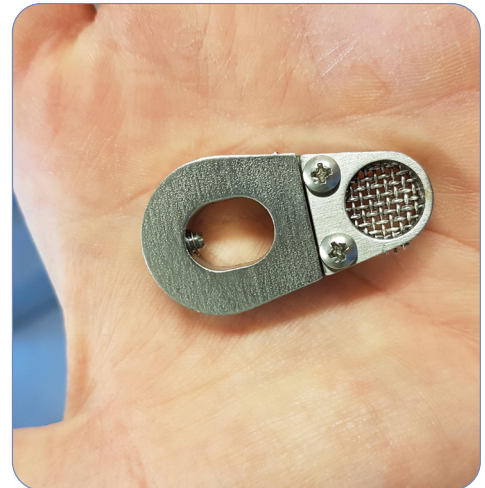

1

Loosen the filter using the supplied Allen key. Wiggle the filter off of the thermocouple.

2

Thoroughly clean the filter under running water.

3

Fit the clean in-line back, and screw it on tightly. Be sure to turn the filter correct with screw heads facing out.
