

FOR CASTING, SPLINTING & BRACING

The only Low Temperature Thermoplastic made of a cotton base and biodegradable polymer. Two well-researched ingredients with no harmful chemicals and FULLY BIODEGRADABLE.

Recent test of biodegradability according to ISO 14855 I-1 standard, showed that X-LITE® is 25% biodegraded after 90 days.

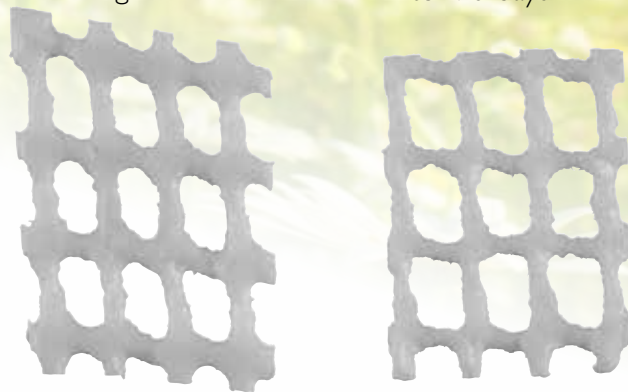

After 90 days, under controlled composting conditions, it is clearly seen that a major part of the material has disappeared. On the left is an original piece of X-LITE® and to the right the same size after 90 days composted.

** Contact Allard Int. for full test report.*

Original

After 90 days
