

CROSS™ Hemi Shoulder

CROSS™ Hemi Shoulder is a comfortable and stable textile orthosis, designed to manage subluxation and shoulder pain (see reference literature under Recommended Literature below). The orthosis is engineered to provide controlled correction of the arm and shoulder position through external rotation and elevation, aimed at alleviating pain, improving posture, and promoting functional movement. In this way, it supports the user's active rehabilitation process.

Recommended Range Of Application

Subluxation, shoulder pain, and dysfunction following conditions such as: Stroke Paretic shoulder/arm due to hemiplegia Brachial plexus injuries

Traumatic shoulder dislocation. Use of Pacemaker. Use of defibrillator (ICD).

Item No.	Model	Size	Measurement 1	Measurement 2
