PatellaCamp

PatellaCamp is a specially designed knee brace to give stabilization to the patella and prevent it from lucating. The brace is bi-lateral and fits both left and right. The 2 elastic straps are fulled in the opposite direction to prevent subluxation of the patella.The brace is an open design that is simply wrapped around the leg and can accommodate most sizes and leg shapes. It is open in the popliteal area to avoid pressure.

Recommended Range Of Application

Chondromalacia patella, after dislocation or subluxationof the patella and patellafemorala pain.

Contraindications

Excessive edema when compression my impede circulation

Measurements

Cirumference mid-patella
