

PatellaCamp

PatellaCamp is a specially designed knee brace to give stabilization to the patella and prevent it from luxating. The brace is bi-lateral and fits both left and right. The 2 elastic straps are pulled in the opposite direction to prevent subluxation of the patella. The brace is an open design that is simply wrapped around the leg and can accommodate most sizes and leg shapes. It is open in the popliteal area to avoid pressure.

Recommended Range Of Application

Chondromalacia patella, after dislocation or subluxation of the patella and patellafemoral pain.

Contraindications

Excessive edema when compression may impede circulation

Measurements

Circumference mid-patella

Item No.	Size	Measurement	L/R	Color
286790012	Medium	<40 cm	Bilateral	Blue
286790013	Large	>40 cm	Bilateral	Blue
