SELECTION® Bromsa wrist orthosis

Selection Bromsa is intended to restrict movement in the wrist in order to off-load the hand extensors, support the wrist and reduce pain in conditions such as Tennis elbow. The orthosis has two plastic stays on the dorsal side, adjustable strap for the thumb and the Selection Closing-system. Adjust the resistance by using only one stay for mild resistance and two for increased resistance. The lacing system helps the orthosis to conform around the wrist and give a superior fit.

Recommended Range Of Application

Lateral epicondylities, hypermobility,rheumatic problems and unspecific pain.

Measurements

Wrist circumference.

Item No.	Model	Size	Measurement	L/R	Color
352081010	Selection Bromsa	X-Small	<11 cm	Left	Black
