KiddieFLOW™

KiddieFLOW™ is an ankle-foot orthosis (AFO) for children with foot drop, unstable gait and other conditions that affect gait function. It is the most flexible model in the Kiddie range and is designed for children from approximately 2 years of age who require support while maintaining freedom of movement. KiddieFLOW™ supports dorsiflexion of the foot during the swing phase and helps control foot positioning in late swing, contributing to improved stability during the stance phase. The flexible footplate allows a smooth transition through the gait cycle and easier roll-off at the end of the stance phase.

KiddieFLOW™ is based on the same principles as the adult FLOW models and retains the same geometry as the other models in the Kiddie range. When increased A/P and M/L control is required, the orthosis can be combined with individual insoles or an SMO.

Recommended Range Of Application

Designed to provide support for foot drop, gait abnormalities associated with proprioceptive impairment, gait instability or low muscle tone, toe walking without midfoot collapse, Spina Bifida, Cerebral Palsy, Muscular Dystrophy, MMC.

Contraindications

Lacking ROM towards dorsiflexion (need at least 5° dorsiflexion past neutral), Very rigid foot structure, Quadriceps spasticity, Fixed postural Genu Valgum or Genu Varum, Fixed postural Pes Valgus or Pes Varus. KiddieFLOW™ should not be selected for children present with crouch gait.
