CS-Spoon

The CS-Spoon is a blue volar spoon, made of Polypropylene. It is anatomically preformed in a resting position of the hand to, according to anthropometric data, fit a majority of the adult population. Can be reshaped by heating with a heat gun. The spoon is made up of thinner and stronger parts, where the strongest support lies at the wrist and the ends are slightly curved to avoid pressure. This provides a dynamic support with good stabilization where desired.

A soft white dorsal plastic spoon that is straight in shape. The spoon has a soft supporting function.

Item No.	Model	Measurement	L/R	Color	Package
352100000	Volar spoon	22x168 mm	Bilateral	Blue	10
352110000	Dorsal spoon	11x148 mm	Bilateral	White	10
